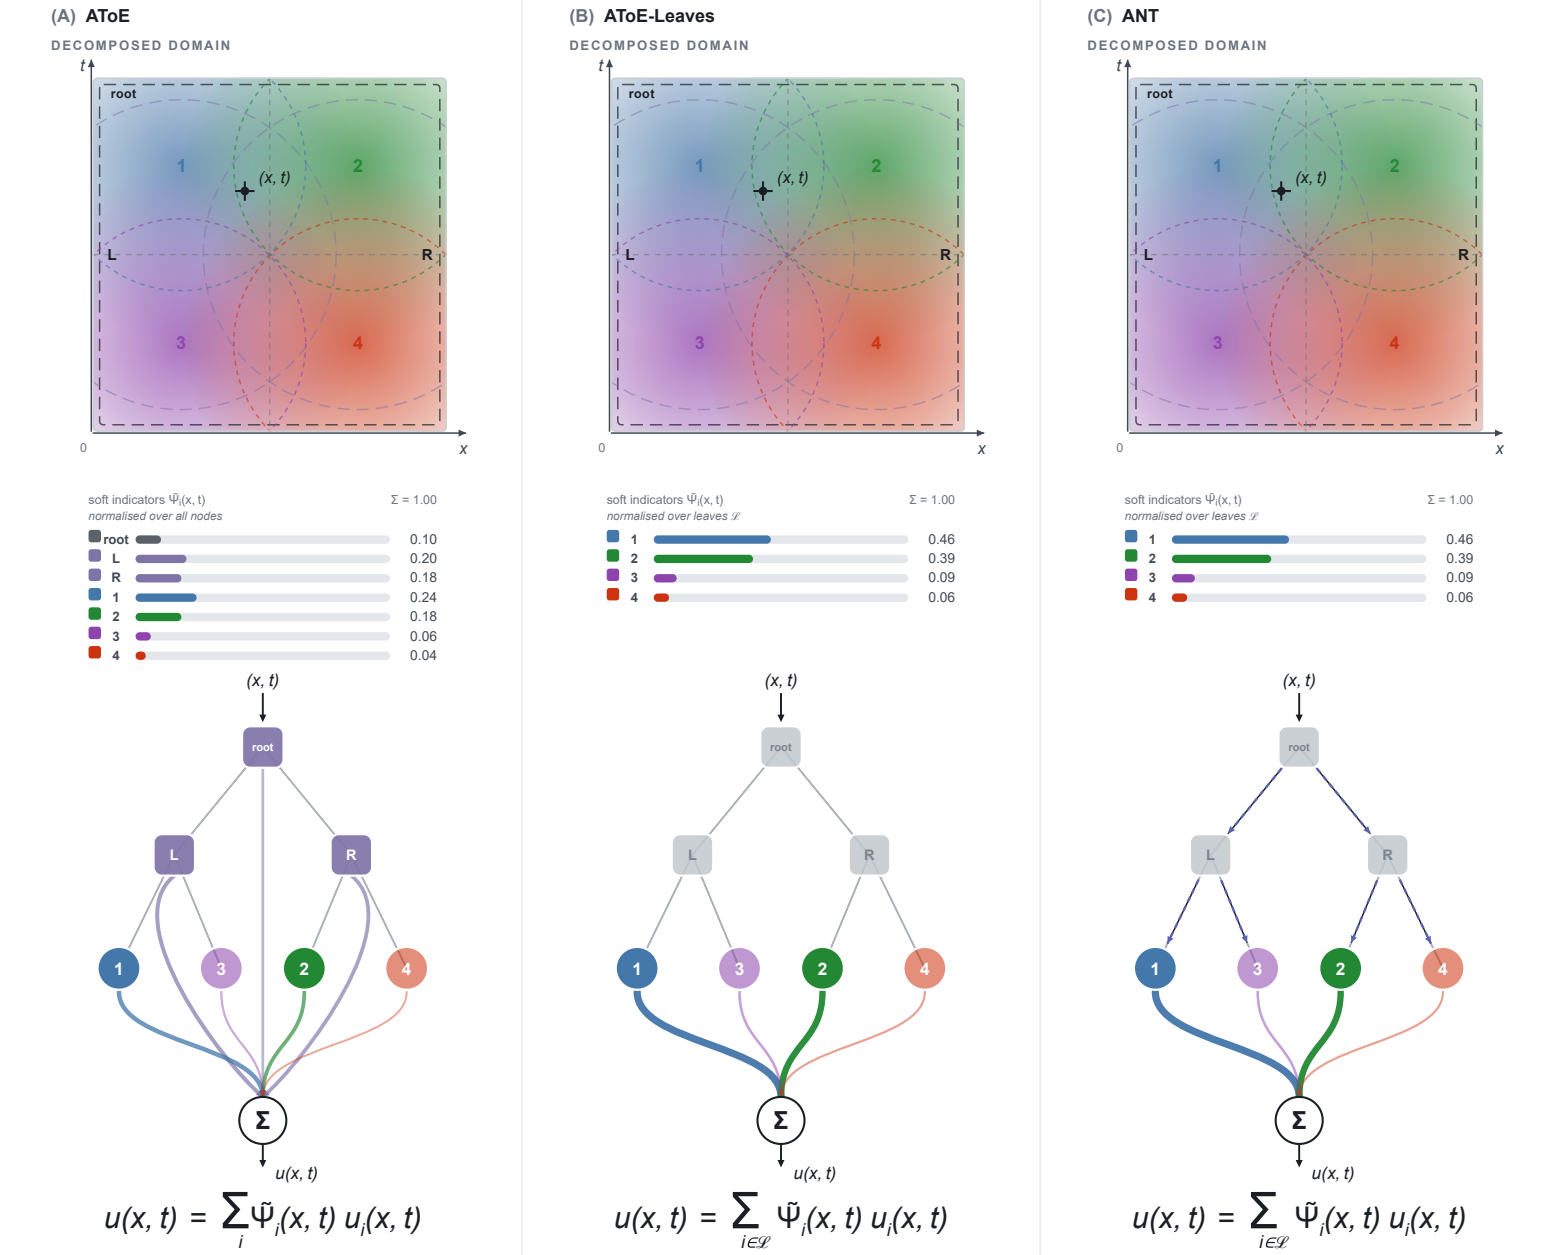
Figure 1. Inference through adaptive tree-structured mixtures of experts *a single query point (x, t) propagated through three architectures*



REGION ↔ NODE
1 = expert 1 · 2 = expert 2 · region 3 · region 4

SOFT INDICATOR
Ψi peaks at the centre, fades out

SUPPORT BOUNDARY
edge of an expert's support, where Ψi→0

PARTITION OF UNITY
overlapping supports sum to 1 everywhere

ACTIVE / INACTIVE
coloured = active; grey □ = inactive

CONTRIBUTION & FLOW
weight = influence
dashed = ANT flow
